FIGHTERBASE

Vegan

Diet guide

Fully plant-based. No animal products.

Prepared 11 October 2026 for FighterBase members. Eating styles library, one of a set.

> DRAFT: not yet reviewed by a registered dietitian. General information only, not medical advice. Check with your doctor or a registered dietitian before changing how you eat, especially if you have a medical condition, are pregnant, or are under 18.

USING FIGHTERBASE

How to use this diet guide

This diet guide is part of your eating styles library in the FighterBase app. The pages that follow are built to be skimmed. You do not need to read it all at once.

1. **Open Nutrition**
   In the app, open the **Nutrition** tab and tap **Eating styles**.

2. **Tap Vegan**
   Read the short summary, what to eat, what to go easy on, and what to watch.

3. **Follow it**
   Tap **Follow this style**. Recipes and the Foods list then filter to match, so you only see what fits. You can follow more than one style.

4. **Download the PDFs**
   Use **Full food list** and **Diet guide** to save these to your phone. Handy for the shop or a restaurant.

5. **Log it and train**
   Meals you log count towards your day. Spend your energy on training, not on reading labels.

> Looking for the full list of foods? Download the **Full food list** PDF from the same screen. It names every allowed and avoided food.

THE BASICS

What is Vegan?

No meat, fish, eggs, dairy or honey. Protein comes from legumes, soy, seitan, grains, nuts and seeds. Plenty of professional fighters eat this way.

Where it comes from

The Vegan Society was founded in England in 1944 and coined the word. Veganism avoids using animals for food, clothing and other purposes as far as practical.

The main ideas

1. No meat, fish, shellfish, eggs, dairy, honey or other animal-derived foods and additives.
2. Beans, lentils, tofu, tempeh, seitan, nuts, seeds, wholegrains, vegetables and fruit make up the diet.
3. Fortified foods and supplements fill the gaps that plants do not.
4. Read labels: animal ingredients appear in unexpected places.

Who it suits

- People avoiding animal products for ethical, environmental or health reasons

Talk to your doctor or a registered dietitian first if:

- You are pregnant or breastfeeding
- You are a child or teenager
- You have symptoms like fatigue, pins and needles or pale skin (get B12 and iron checked)
- You train hard and do not know your intake

TRAINING

Fuel for training

- Aim for protein at every meal: tofu, tempeh, soya yoghurt, lentils, beans, seitan, peas, quinoa.
- Soy and pea protein are complete proteins; mixing plant proteins across the day works well.
- Carbs from rice, oats, potatoes, pasta and fruit are easy on a vegan diet.
- Higher-calorie foods (nuts, nut butter, avocado, olive oil) help in camp if you struggle to eat enough.
- Pea or soy protein powder helps when you are busy.

> Soy or pea protein, tofu or tempeh after training. Lentils, oats, rice and fruit for fuel. Mixing different plant proteins over the day covers your needs.

Nutrients to keep an eye on

Vitamin B12
not reliably found in plants
Where: fortified foods and a B12 supplement. Needed by all vegans

Vitamin D
low sun in the UK winter
Where: a vitamin D supplement (look for D2 or vegan D3 from lichen)

Iron
plant iron is absorbed less well
Where: lentils, beans, tofu, dark greens, fortified cereal, with vitamin C

Calcium
no dairy
Where: fortified plant milks and yoghurts, calcium-set tofu, kale, broccoli

Iodine
low in plant foods
Where: iodised salt (small amounts), seaweed with care, a supplement if advised

Omega-3 (EPA/DHA)
no fish
Where: algae-based supplement; walnuts, flax, chia give ALA

Zinc and selenium
lower availability
Where: nuts, seeds, beans, wholegrains, Brazil nuts (one or two a day)

Creatine
no animal sources
Where: creatine monohydrate is vegan; talk to a professional

Common mistakes

- Not supplementing B12
- Not eating enough protein or calories
- Relying on processed vegan junk food
- Forgetting iodine, calcium and omega-3

EVERYDAY LIFE

Labels, eating out and swaps

Reading labels

- Casein, whey, lactose, albumin, gelatine, carmine (E120), shellac (E904), isinglass, beeswax (E901), L-cysteine (E920), lanolin
- Vitamin D3 is usually from sheep's wool unless labelled vegan
- Some wines, beers and sugar are filtered with animal products
- 'May contain milk' is a cross-contamination warning, not an ingredient

Eating out

- Check the menu for a V or VG label.
- Ask about butter, honey, egg and milk in sauces and breads.
- Good choices: bean burritos, vegetable curries (check ghee), tofu stir-fries, falafel, pasta with tomato sauce, Thai and Indian restaurants.

Easy swaps

Milk	→	Fortified soya, oat or pea milk
Eggs	→	Tofu scramble, chickpea flour omelette
Butter	→	Olive oil or dairy-free spread
Honey	→	Maple syrup or agave
Yoghurt	→	Fortified soya or coconut yoghurt
Cheese	→	Nutritional yeast or vegan cheese

PUT IT INTO PRACTICE

A sample week

One way a week could look. Portions and total food depend on you and your training.

	Breakfast	Lunch	Dinner
Mon	Porridge with soya milk, banana, peanut butter	Hummus and falafel wrap, salad	Lentil bolognese with pasta
Tue	Tofu scramble on toast	Chickpea salad sandwich	Tofu and vegetable stir-fry with rice
Wed	Soya yoghurt, berries, granola	Bean and sweet potato soup, bread	Chickpea and spinach curry with rice
Thu	Peanut butter on toast, fruit	Jacket potato with beans and avocado	Black bean burritos
Fri	Overnight oats with seeds	Quinoa and roasted veg salad with tempeh	Dahl with rice and greens
Sat	Pancakes (plant milk) with fruit	Minestrone and bread	Tempeh and vegetable noodles
Sun	Smoothie with oats and pea protein	Leftovers bowl	Lentil and vegetable shepherd's pie

Snacks

Fruit and nuts · Hummus and veg · Roasted chickpeas · Edamame · Oatcakes and nut butter · Soya yoghurt

Shopping list

Fortified soya milk and soya yoghurt · Tofu, tempeh, soya mince, seitan · Lentils, beans, chickpeas · Oats, rice, pasta, quinoa, wholemeal bread · Vegetables, fruit, frozen berries · Nuts, seeds, nut butter, tahini · Nutritional yeast, B12 supplement

GOOD TO KNOW

Questions people ask

Can I get enough protein?

Yes, if you eat enough calories and a variety of plant proteins. Many vegan athletes do well.

Do I have to take supplements?

B12 is essential. Vitamin D is advised in UK winters for everyone. Others depend on your diet and tests.

Is it safe for fight camp?

It can be, but weight cuts on any diet need professional support. Talk to a sports dietitian with plant-based experience.

The Vegan Society; British Dietetic Association vegetarian and vegan fact sheet; NHS.

For fighters and combat athletes

- **No eating style makes a rapid weight cut safe.** Sweating, fluid restriction and crash diets hurt performance and can be dangerous. Plan any weight cut with a registered sports dietitian and your coach, well before the weigh-in.
- **Fuel the training first.** Hard sparring and conditioning need carbohydrate and enough total food. If a style cuts a food group, have a plan to replace what is lost.
- **Protein across the day.** A common general range for people training hard is about 1.4 to 2.0 g per kg of body weight a day (draft range, to be confirmed by a dietitian).
- **Try changes in training, never in fight week.** Test new foods, supplements and timing well before competition.
- **Under 18, pregnant, or with a medical condition:** get advice from a doctor or dietitian before changing your diet.

FIGHTERBASE

Train. Eat. Recover. Repeat.

Your eating styles library lives in the Nutrition tab. Pick a style, follow it, and get back to training.
